EDUCATION

2015 - 2021 **EASTERN MEDITERRANEAN UNIVERSITY**
Bachelor's Degree in Architecture
Famagusta, Cyprus

2009 - 2013 **AL-IQBAL INTERNATION SCHOOLS**
American Curriculum
Riyadh, Saudi Arabia

WORK EXPERIENCE

2024- 2024 07 - Present
DESIGN MANAGER / HEAD OF ARCHITECTS
Diyar AL-Qimah Eng. Consultant | Riyadh, KSA
- Lead and coordinated architectural projects from concept to completion.
- Managed and mentored a team of architects and drafters.
- Client communications, understanding their needs, presenting design concepts, and providing updates on project progress.

2022- 2024 02 - 05
MID-LEVEL ARCHITECT / PROJECT MANAGER
Alshayeb Consultant | Riyadh, KSA
- Part of the management team for multiple small and large scaled projects starting from the concept phase up to the construction phase.
- Worked with Riyadh Region Municipality, Sub-Municpalities, Balady, RCRC, GACA, For licensing various projects
- Participated in mega projects such as NHC housing Projects, Eyal Projects (Asala formerly), Al-Jawhara Mall in Jeddah, and many others.

2021- 2022 11 - 02
JUNIOR ARCHITECT
Mohammad Al Habib Real Estate Co.| Riyadh, KSA
- Create architectural plans , sections , elevations.
- Manage clients projects.
- Interview with clients.
- Prepare the MPEs - BOQs & shop drawings.

2018- 2018 08 - 10
TRAINEE ARCHITECT
Mohammad Al Habib Real Estate Co.| Riyadh, KSA
- Created concepts and shop drawings.
- Prepared 3Ds and other presentational drawings.
- Worked on Facade Development for the Royal Palace.

M. Traveller's Tower

Type : Mixed-use building
Location : Riyadh, Saudi Arabia, King Salman bin Abdulaziz Road
Date : 2023

As a dialogue that inspires urban planning, open spaces, and architecture, the Salmani Architecture Manifesto emphasizes the originality of vernacular tectonic elements through contemporary architecture.

In response, the concept aims to reinterpret the textures originating from nature through its random formation, arranging them in order and rhythm to establish a distinct style, resulting in a facade that contextualizes the architectural style firmly and emphasizes its presence.

Asala Al-Juwan

Type : Residential Villas

Location : Riyadh, Saudi Arabia, King Salman bin Abdulaziz Road

Date : 2023

Asala Al-Juwan project is located in the north of the city of Riyadh, within the best upscale neighborhoods of Riyadh (Al-Jawan Suburb), which is distinguished by its strategic location directly on Prince Faisal bin Bandar bin Abdulaziz Road and its proximity to King Salman Road, at a distance of 7.50 km. The design of the Asala Al-Juwan project is characterized by following the style Al-Salmani Architect through the external facades, which embodies originality in design in a modern, modern template.

EYAL AL-FORSAN

Type : Residential Villas

Location : northeast of Riyadh, Saudi Arabia
Date : 2024

Eyal Al Fursan is a visionary residential development nestled in the northeastern corridor of Riyadh, forming part of the Kingdom's largest suburban community. Spanning over 35 million square meters, the project is designed to offer a modern, integrated lifestyle rooted in the cultural authenticity of Salmani architecture. It embodies a harmonious blend of traditional values and contemporary living, providing more than 50,000 residential units that can accommodate over 250,000 residents.

The master plan promotes sustainability and social connectivity through expansive green spaces, pedestrian-friendly pathways, and a complete array of educational, recreational, commercial, and healthcare facilities. With an emphasis on wellness, comfort, and community, Eyal Al Fursan is not only a place to live—it is a place to belong, grow, and thrive for generations to come.

IRQA VILLA

Type : Residential Villa

Location : Riyadh, Saudi Arabia, Irqa District

Date : 2025

This project is located in the western part of Riyadh, within the distinctive Irqa District, known for its unique character and strategic urban regulations applied specifically to the city's west side. It enjoys a prime location just 3.5 kilometers from the Western Ring Road, offering convenient access to key parts of the city. The design follows the Al-Salmani architectural style, expressed through the external façades, blending traditional Saudi aesthetics with a modern architectural approach to create a sense of cultural authenticity within a contemporary framework.

AL JAWHARA MALL

Type : Commercial Mall

Location : Jeddah, Saudi Arabia,
Khayala Suburb

Date : 2022

Al-Jawhara Mall is one of the new and prominent contemporary developments in the city of Jeddah. The project aims to create a comprehensive, multi-use commercial center that aligns with the needs of modern life while respecting the cultural values and privacy of Saudi society, all while maximizing the project's investment potential.

The design reflects a thoughtful and balanced architectural approach, emphasizing the strong presence of the mall's mass while incorporating sculptural voids that enhance its visual identity. This approach creates a distinctive external form, spacious interior areas, and a gradual spatial transition from the outer edges toward the center. The result is a harmonious structure that allows for smooth circulation and interaction between its various functions.

BLACK HOUSE
CENTURY BURGER

MIXED-USE APARTMENT

Type : Mixed-use

Location : Riyadh, Saudi Arabia, Irqa district

Date : 2024

This project is located in the Irqa District, in the western part of Riyadh—a neighborhood known for its distinctive character and strategic urban planning. With its proximity to the Western Ring Road, just 3.5 kilometers away, the site offers excellent connectivity while maintaining a strong local identity.

The development features a mixed-use design, combining ground-floor commercial spaces with upper-level residential units. Architecturally, the project embraces a modern aesthetic with balanced proportions, thoughtful openings, and a clean facade treatment. The result is a structure that supports contemporary lifestyles while respecting the cultural and environmental context of its setting.

PROFESSOR’S CLINIC

Type : Medical clinic

Location : Riyadh, Saudi Arabia,
Al-Amana Dist.
Date : 2022

The Medical Clinic Building in Riyadh showcases a modern, minimalist design that emphasizes both function and visual clarity. Its facade features a refined mix of concrete and tempered glass, offering a balance between openness and privacy while projecting a strong, professional presence.

Architectural elements such as clean lines, sculpted voids, and carefully positioned openings create depth and rhythm across the building envelope. Internally, the layout promotes smooth circulation and natural light penetration, enhancing the user experience. The result is a healthcare facility that merges contemporary aesthetics with efficient, patient-oriented design.

RECONCILIATION CENTER

Type : Mixed-use

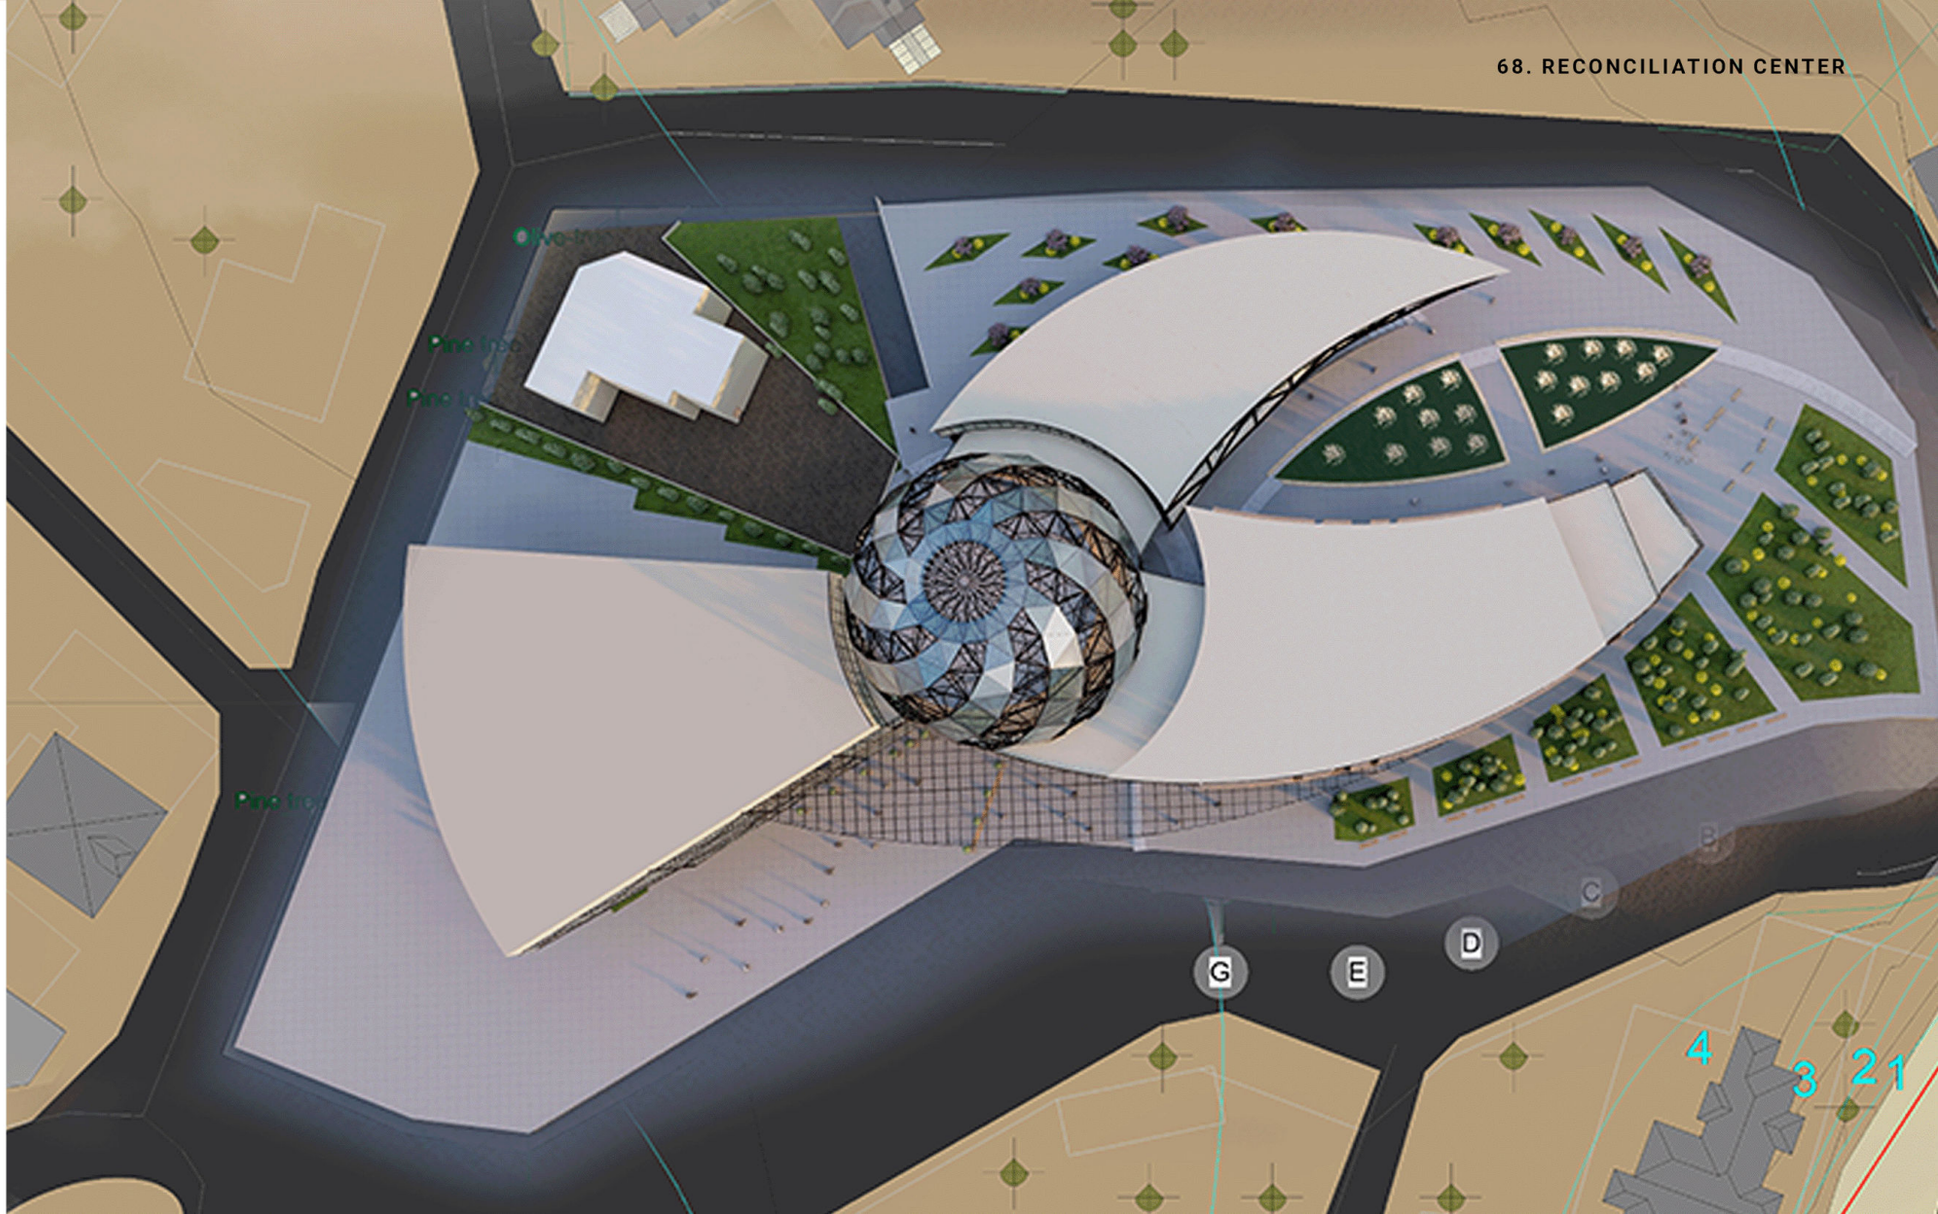
Location : Cyprus, Famagusta
Verosha Dist.
Date : 2020

TOP TEN GRADUATION PROJECTS
Faculty of Architecture - EMU

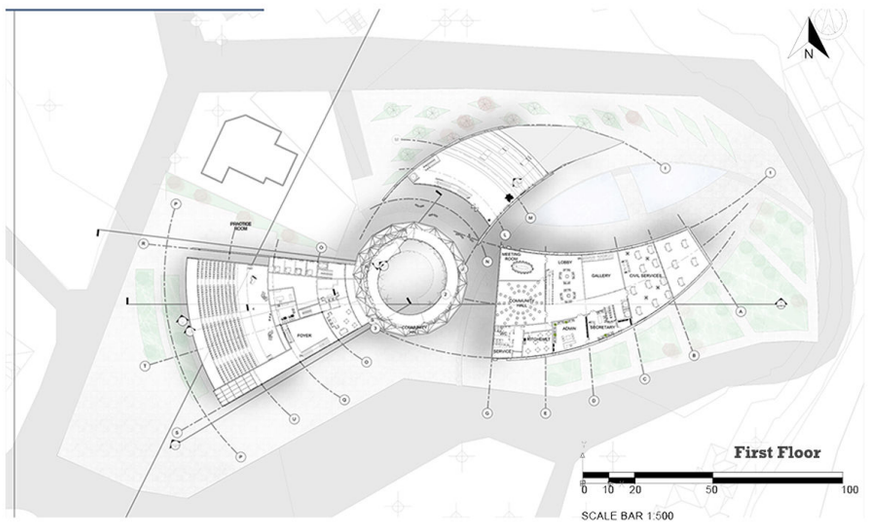
Located in Varosha, Famagusta—an area shaped by historical conflict—this Reconciliation Center is designed as a space for healing, unity, and personal growth.

The project is organized around four core themes: physical, mental, social, and individual growth. Each is represented through distinct architectural expressions—from rigid and grounded forms to open, floating structures—symbolizing resilience, freedom, community, and self-development.

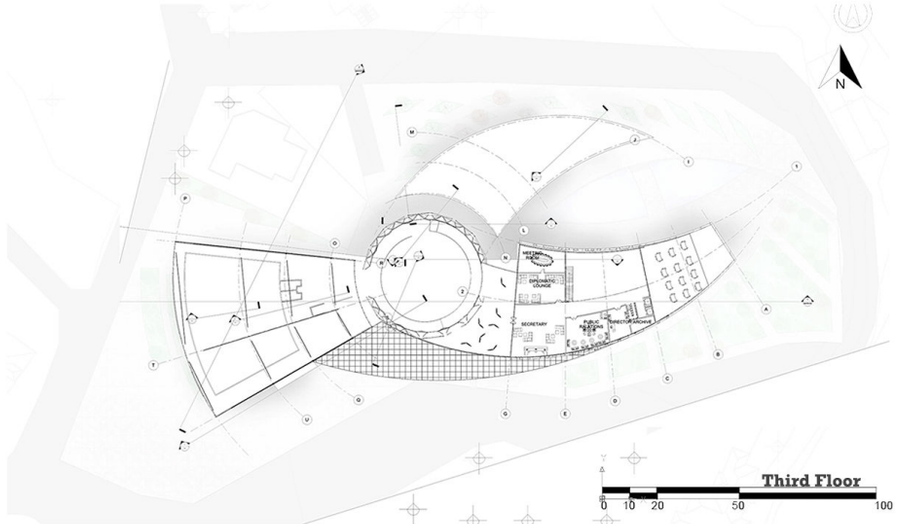
At the center is a spherical structure symbolizing the individual journey, with a ramp leading to an open exhibition space, emphasizing the climb toward holistic growth. The architecture balances symbolism with function, creating a space that bridges the past and inspires a shared future.



SCALE BAR 1:500



SCALE BAR 1:500



SCALE BAR 1:500

Al Khaleej Dist. Tower

Type: Mixed use
Location: Al Khaleej District, Riyadh, Saudi Arabia
Date: 2026

A mixed-use development in Al Khaleej District, Riyadh, bringing street-level retail and upper-level residences together on a 4,000 m² site. The proposal combines two basement parking levels, a dedicated mechanical floor and a roof level within a unified building envelope.

Concept / Design response

A sand-toned façade, horizontal bands and geometric screens reinterpret local architectural motifs. Single- and double-height planted recesses break the long elevation into a measured rhythm, adding depth and shaded outdoor connections.

01 / CHALLENGE

Combine street-level retail with residential privacy.

DESIGN RESPONSE

A distinct residential entrance and upper-level apartment layout separate arrival from the retail frontage.

02 / CHALLENGE

Give a long building frontage a coherent local identity.

DESIGN RESPONSE

Sand-toned façades, horizontal bands, geometric screens and planted recesses create rhythm, shade and depth.

Al Nafl Dist. Tower

Type: Mixed use
Location: Al Nafl District, Riyadh, Saudi Arabia
Date: 2026

A mixed-use proposal in Al Nafl District, Riyadh, combining retail, offices and apartments on a 4,400 m² site. A shared podium supports two upper building volumes, with three basement parking levels, a mechanical floor and roof services.

Concept / Design response

Stepped masses and a central opening create a vertical composition above the podium. Deep horizontal planted terraces and vertical screens shape the façades, while the ground-level entrance and outdoor spaces connect the development to the street.

01 / CHALLENGE

Coordinate retail, offices and apartments within one development.

DESIGN RESPONSE

A shared podium supports two upper volumes, with the mix of uses organized by floor and basement parking below.

02 / CHALLENGE

Balance shaded façades with light and outdoor space.

DESIGN RESPONSE

Vertical screens, stepped terraces and a central opening connect the building to planted spaces.

Third-floor public terrace

Entrance lobby

Alrabwa Dist. Villa

Type: Private residence
Location: Alrabwa District, Riyadh, Saudi Arabia
Date: 2025

A private villa on a 675 m² plot in Riyadh, designed around three living zones with carefully controlled circulation. The brief calls for privacy at ground level, selected connections above, and a double-height living space that maintains a visual relationship with the first floor.

Concept / Design response

The organizing idea is a changing relationship between zones across the building's levels. Zones 1 and 2 remain separate on the ground floor, while connections on the first floor and roof allow them to function together when required. Zone 2's double-height space adds a vertical connection within this arrangement.

01 / CHALLENGE

Accommodate three distinct living zones with limited circulation between them while maintaining one villa rather than three fully walled-off subdivisions.

DESIGN RESPONSE

Developed a level-by-level zoning strategy that balances household privacy with selected internal connections, responding to the client's needs and the regulatory constraint described in the brief.

02 / CHALLENGE

Keep Zones 1 and 2 separate on the ground floor while allowing them to connect on the first floor and roof level.

DESIGN RESPONSE

Concentrated their shared connections on the upper levels, preserving independent ground-floor circulation.

03 / CHALLENGE

Give Zone 2 a double-height ground-floor space while retaining connections to the first floor.

DESIGN RESPONSE

Used a double-height living space and overlooking upper-level circulation to create visual continuity without opening every ground-floor zone to one another.

Aljazerah Dist. Family Villas

Type: Family residences
Location: Aljazerah District, Riyadh, Saudi Arabia
Date: 2025

One family commission on an 800 m² plot divided into two neighboring homes: the father's residence on the left and the son's residence on the right. Each household has an independent layout, while the two buildings are presented as a coordinated residential project.

Concept / Design response

The design balances family proximity with household independence. Separate entrances, reception areas, parking and vertical circulation allow the two homes to operate individually. Stepped volumes and setback roof annexes connect the two residences; the revised exterior render set presents light stone surfaces, darker panels and recessed glazing.

01 / CHALLENGE

Accommodating two generations on one divided plot while preserving each household's privacy and independence.

DESIGN RESPONSE

Two distinct homes within one family project, each with its own entrances, parking and vertical circulation.

02 / CHALLENGE

Bringing light and outdoor connections into a dense, multi-level arrangement, including the son's basement.

DESIGN RESPONSE

Courtyards, open-to-above/below spaces and roof terraces that connect the interior layouts to outdoor space.

03 / CHALLENGE

Organizing guest reception, family living, bedrooms and service spaces around separate circulation needs.

DESIGN RESPONSE

Dedicated reception and family zones, with lifts and stairs linking the residential levels; the father's first-floor study also includes an alternative bedroom arrangement.

Al-Maseef Apartment Building

Type: Residential apartments
Location: Al Maseef District, Riyadh, Saudi Arabia
Date: 2025

A residential apartment building on an 875 m² corner plot in Al Maseef, Riyadh. Ground and typical floors organize three apartments around shared circulation, while a setback roof level accommodates additional residential spaces and outdoor terraces.

Concept / Design response

The project combines compact apartment planning with a layered façade of light stone, recessed balconies, vertical screens and contrasting accents. The building addresses two street edges, with parking and entrances arranged around its corner setting.

01 / CHALLENGE

Fit several independent apartments, shared services and parking onto a compact corner plot.

DESIGN RESPONSE

Three apartment layouts are arranged around shared stair and lift circulation, with parking organized along the street edges.

02 / CHALLENGE

Combine household privacy with daylight and outdoor space.

DESIGN RESPONSE

Recessed balconies, façade screens and a setback roof level provide outdoor connections while maintaining separation between apartments.
